

FAMILY PLANNING HEALTH PROFILE ETHIOPIA 2019

General statistics			Summary FP statistics		
Total population (000's)	2019	112,079	Demand satisfied (%)	2019	61
Total fertility rate (births per women)	2012	4	mCPR (%)	2019	26
Adolescent Birth Rate (births per 1000 adolescent females)	2014	80	Unintended pregnancies (000's)	2019	2,755
IMR (deaths per 1000 live births)	2018	39	Unmet need (%)	2019	24
MMR (deaths per 1000 live births)	2017	401	Unsafe abortions averted (000's)	2019	607

Definition of Indicators	References
<p>1. mCPR: % of women of reproductive age who are using (or whose partner is using) a modern contraceptive method at a particular point in time.</p> <p>2. unmet need: % of fecund women of reproductive age who want no more children or to postpone having the next child, but are not using a contraceptive method, plus women who are currently using a traditional method of family planning.</p> <p>3. demand satisfied: percentage of women (or their partners) who desire either to have no additional children or to postpone the next child and who are currently using a modern contraceptive method.</p> <p>4. Unintended pregnancies: Nb of pregnancies that occurred at a time when women (and their partners) either did not want additional children or wanted to delay the next birth.</p> <p>5. unsafe abortion: Nb of unsafe abortions that did not occur during a specified period as a result of the protection provided by modern contraceptive use during the reference period.</p> <p>6. Facilities stocked out: % of facilities stocked out of each type of contraceptive offered, on the day of assessment.</p> <p>7. Method availability: % of primary (resp. secondary/tertiary) service delivery points with at least 3 (resp. 5) modern methods of contraception available on day of assessment.</p> <p>8. Total fertility rate: Average nb of children a hypothetical cohort of women would have at the end of their reproductive period if they were subject during their whole lives to the fertility rates of a given period and if they were not subject to mortality.</p> <p>9. Adolescent birth rate (ABR): Nb of births to adolescent females, aged 15-19 occurring during a given reference period per 1,000 adolescent females.</p> <p>10. Maternal mortality ratio (MMR): Annual nb of female deaths from any cause related to or aggravated by pregnancy or its management per 100 000 live births.</p> <p>11. Infant mortality rate (IMR): probability of dying between birth and age 1 per 1000 live births.</p>	<p>Indicators 1 to 7 From FP2020 2019 Progress Report, most recent national surveys (DHS, PMA2020, MICS, RHS and other national surveys).
